

D-wave

Size: 150 x 46 weight: 3,25 kg

The 2007 D-Wave is a completely new shape which uses our last year's experience and is benefiting from our innovative solutions. We designed this board for bigger waves, stronger winds, radical bottom turns and cut backs. This board will feel more like a surf board and get you out in the glass sooner, remaining loose underfoot but with plenty of bite in the turn due to our original concept of 3D rails, "tucked under edge" on the nose, and "sharp" on the tail. 8cm fins set in „thruster" configuration are not too big but, together with the sharp edge of the tail, they guarantee an absolutely sure grip in the turns. Thanks to its flexible construction the board bends in the radical turns like a snowboard, fitting its rocker line to the turning radius. While straight-on riding the rocker line is relatively flat what enables a perfect planning. D-wave is a truly high-end board and we hope that many top-riders will appreciate its unbeatable parameters, durability and reliability.

Available colors: pink, green, blue

Skimsurf

Size: 139 x 48 weight: 3,25 kg

The Skimsurf has the same shape then the D-wave 06 but is equipped with thicker pads and its footstraps can be fixed in another way. The Skimsurf was designed for light wind and small waves. This is the board that you want to have when it is blowing 8 to 17 knots and the waves are no bigger then 2 meters. Planes like a skim board but feels like a wave board. Also, if you want to use it as a skim board, all you have to do is remove the straps and fins.

Available colors: pink, green
